

# Bringing CONFIDENTIAL COMPUTING to Kubernetes

LACHLAN EVENSON | Microsoft Azure

Principal Program Manager, Azure Container Compute  
Board Member, Cloud Native Computing Foundation

# Application security

## CONCERNS

Data leaks

Unauthorized data access

Infrastructure confidence

Regulatory compliance

## GOALS

Hardware-level data protection

Confident processing of multi-tenant data

Safer sensitive and confidential data IP

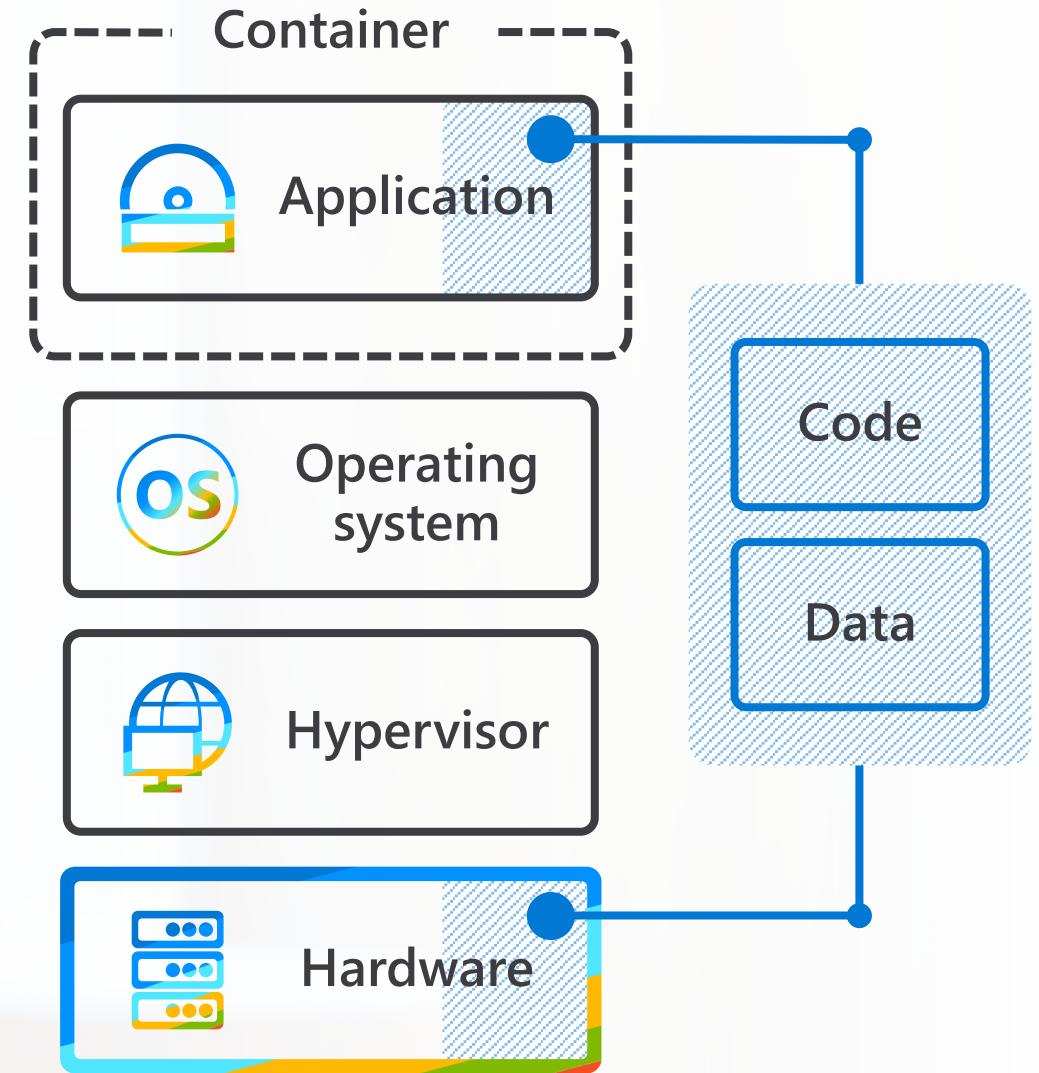

@OpenAtMicrosoft

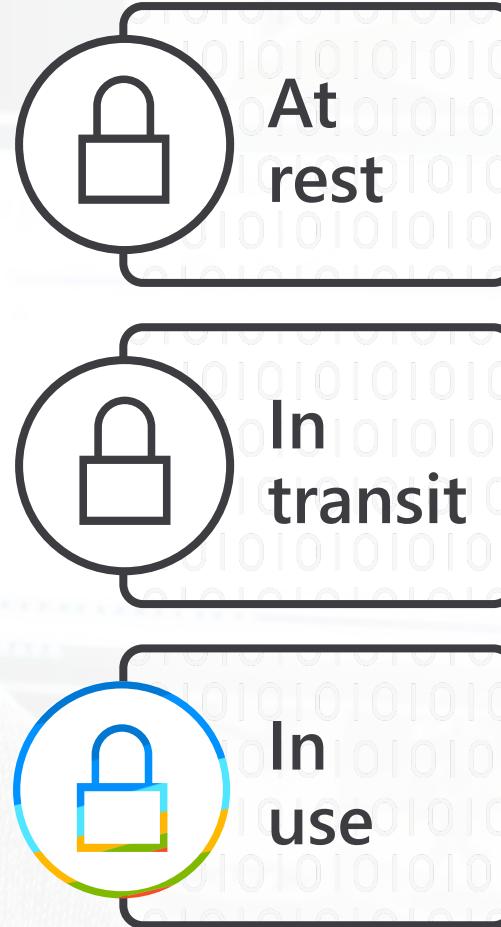

Microsoft Azure

# Layers of abstraction

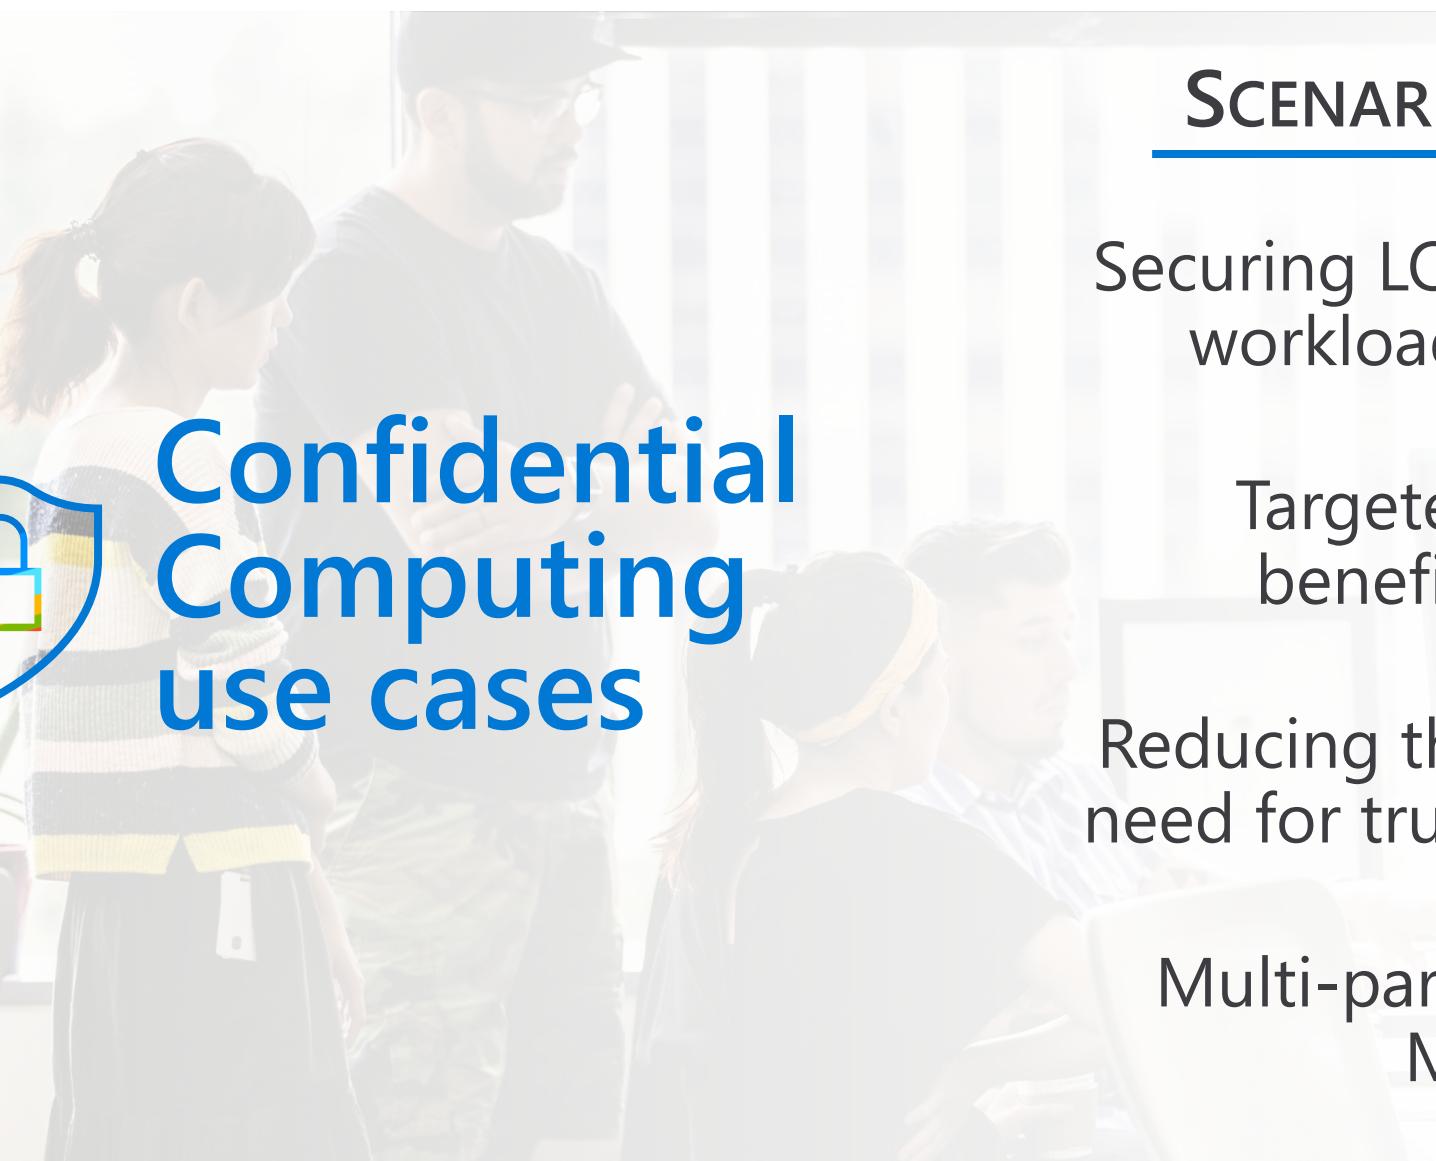

# Announcing!

## Confidential Computing for Kubernetes

Existing  
encryption

Trusted  
Execution  
Environment

# Confidential Computing use cases

## SCENARIO

Securing LOB workloads

## USE CASE

Payment processing

Targeted benefits

Reducing the  
need for trust

Multi-party  
ML

Distributed  
consensus

New  
medicines

# confidentialcomputing.io

# Confidential Computing Consortium

**PROJECTS:** Intel Software Guard Extensions SDK | Open Enclave SDK

A community effort under the Linux Foundation to secure data in use

# Using Open Enclave SGX device plugin

```
$ kubectl get nodes node01 -o yaml  
[...]  
status:  
  allocatable:  
    cpu: "4"  
    memory: 15656620Ki  
    openenclave.io/sgx_epc_MiB: "82"  
[...]
```

# Example specification

```
spec:  
  containers:  
    - name: <image_name>  
      image: <image_reference>  
      command: <exec>  
  resources:  
    limits:  
      openenclave.io/sgx_epc_MiB: 64
```

A blurred background photograph shows two individuals at a booth. One person on the left is wearing a hoodie with a comic book superhero logo and holding a coffee mug. The other person on the right is wearing a light-colored shirt. The overall theme is a professional conference.

## Next steps

VISIT the Azure booth to talk about Confidential Computing and related open source projects
